Capacent Stabilize & Improve
"Interim management"

"Unique offer combining interim consulting with hands-on management consultancy competence"

Stabilize & Improve

Unpredictable changes can occur in an instant, for which one is completely unprepared. For instance, a sudden departure of key personnel or a considerable disruption in the financial processes. These occurrences can be both problematic and costly for a company.

To help you keep your head over the water, Capacent has developed a unique offer combining interim consulting with hands-on management consultancy competence. We call this approach Stabilize & Improve.

We can provide you with an interim solution with management thinking, structure and experience. Our consultants have a hands-on approach, combining a holistic perspective with solid financial and accounting knowledge. Improvement and efficiency are top priority from day one.

Stabilize & Improve is more than just a resource replacement. Our consultants have a structured and solution-driven approach with an implementation-oriented mindset to achieve the set targets.

Three steps from a burning platform to a structured transformation

1

Stabilize

Interim support that works hands-on to solve the critical issues, secure short-term targets and ensures commitment through weekly follow-up meetings. In this phase, improvements are identified, structured and documented through agile working methods.

2

Improve

This phase provides fact-based improvement analysis based on the overall experience gained during the stabilization phase and comprise workshops for defining as well as anchoring transformation activities. Furthermore, a concrete action plan that secures the run of the stabilization actions is presented.

3

Transform

In the final phase, the transformation of the defined activities, milestones and timelines are managed and controlled. The improvement activities are implemented, and the future targeted state secured.

- one** Ensure that Finance addresses critical issues and stabilizes working methods and processes.
- two** Initiate improvement activities to ensure long-term efficiency and stability for Finance.
- three** Implement a structured Finance transformation.
